

What Patients Are Saying

“My wife and I are over the moon happy with our investment in IntellxxDNA. We have spent tens of thousands of dollars on treatment trying to get our daughter well. Her anxiety was paralyzing... Now, on her new regimen based on her IntellxxDNA report, she goes to school, attends parties, and has even joined a sports team. She is finally living a normal life.”

-Eric, IntellxxDNA Parent

“After spending over \$70,000 on various treatments without much success, I turned to IntellxxDNA. Incredibly, in just two months, we've seen more progress in my son's health than we did in a decade of visiting top autism clinics across the country.”

-Peter, IntellxxDNA Parent

IntellxxDNA

Frequently Asked Questions

Genomics seems scary. Do I really want to know?

Your DNA is not your destiny. In fact, understanding your genomic profile empowers you to make intelligent health and wellness choices that may impact your future quality of life.

Why do I have to order this report through my doctor or clinician?

Requiring IntellxxDNA providers to be licensed medical professionals legally allows us to include much more advanced medical information in our reports.

Does health insurance pay for IntellxxDNA tests or reports?

IntellxxDNA reports are not covered by insurance.

What is your privacy policy?

Your DNA will be sent to the lab and identified ONLY by a numeric barcode for outstanding privacy. Your DNA will never be sold. The IntellxxDNA database is encrypted and secure.

Understanding our refund policy:

We have a straightforward refund policy to protect the integrity of test kits, patient privacy and genomic reporting. IntellxxDNA collection kits and genomic reports are non-refundable and cannot be re-sold or transferred to another person.

IntellxxDNA Genomics for Pediatrics and Neurodevelopmental Concerns

WHAT DO INTELLXXDNA REPORTS SHOW?

Genomics explores the small DNA differences affecting our health and interactions with the environment, including our responses to air pollution, nutrient metabolism, and reactions to substances like alcohol and tobacco. IntellxxDNA reports delve into these genetic details, examining your child's unique DNA variants or SNPs that may indicate potential health benefits and risks.

These reports aid your child's clinician in understanding the intricate interaction of these variants and their impact on their life, offering actionable, evidence-based intervention strategies tailored to their genetic makeup for true personalized care. This encompasses suggestions related to environment, lifestyle, nutrition, supplements, and medications, enabling a comprehensive and personalized discussion between you and your child's clinician.

MAKE INTELLXXDNA GENOMIC REPORTS THE GUIDE TO YOUR CHILD'S HEALTH

- Learn how to **support their body** and mind using personalized nutrition, vitamins, and supplements, as well as lifestyle changes to reduce the need for medications.
- **Reduce frustration, time, and money** by using state-of-the-art advanced genomic technology to avoid unnecessary typical, trial and error approach to treatment.
- **Feel confident** that your child's health care plan is being designed specifically for them!

HOW DOES THE TEST WORK?

1. **INTELLXXDNA** is ordered by your child's clinician.
2. **ACTIVATE** the kit's unique barcode for privacy and security.
3. **COLLECT** cheek swab sample following the instructions provided.
4. **MAIL** the completed kit back to the lab in the provided postage paid mailer.
5. **SCHEDULE** a follow-up appointment with your child's clinician to review their results.

Pediatric Report Options

Neurodevelopmental Report

The Neurodevelopmental Report is comprised of the Mental Wellness Report along with supplementary panels that cover topics that relate to glutamate, neural connectivity, GABA receptors, mitochondrial factors, cell signaling, and more. This unique combination of topics is ideal for individuals with neurodevelopmental issues such as Autism Spectrum Disorder, Asperger's, PANDAS, and PANS. The Neurodevelopmental Report is designed to help clinicians identify root causes and create a plan using targeted potential interventions to provide an individualized health plan.

Mental Wellness Report

This report is ideal for individuals of all ages who want to understand how DNA may contribute to their mental wellness. It allows for development or optimizing a treatment plan for addressing stress, attention and focus, anxiety, depression, and OCD type behaviors as well as understanding and addressing addictive behaviors including cravings for sugar, alcohol, nicotine, and drugs or even shopping and gambling. Displays over 250 clinically significant researched gene variants.
